

When it comes to hunting and competitive shooting, reaction and timing are everything.

Whether it's game and bird movement, trap release or range commands, hearing is an important advantage in your shooting accuracy and enjoyment, not to mention your safety.

The sportsmen that excel are the ones who can take full advantage of every sound, however slight, to hear their target before seeing it.

And because firearm use can damage hearing permanently, a shooter's ability to acquire and locate sounds is often diminished over time.

Magnum Ear custom instruments are precisely crafted for your ear(s) and available in a variety of configurations.

Options include digital circuitry, a "power-boost" push button and two-way radio technology.

Now you can enhance this sense much like a scope and binoculars do for your vision. Hear your target sooner and more clearly – taking full advantage of one of your most powerful senses to increase your reaction time. All without interfering with your firing position.

Magnum Ear custom and the economical EarScope behind-the-ear systems are designed for all types of shooting – firearm and bow.

Magnum Ear's new digital circuitry provides clear and natural sound quality, amplifying the sounds of an approaching target, while suppressing dangerous muzzle blasts that are detrimental to your hearing.

On custom styles, an optional "power-boost" push-button is available. Choose the higher output setting when you're in the field and use the lower setting

Economical EarScope behind-the-ear instruments are built from the highest quality Titanium to last a lifetime.

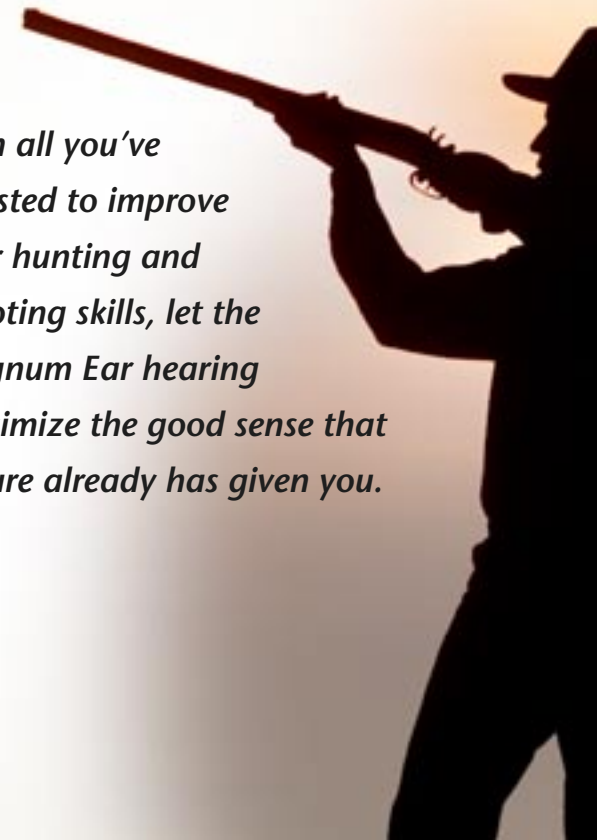

The unique bullet design ensures a secure fit and comes standard with a comfortable foam earmold.

on the range. Both enhance and protect hearing, but the field setting increases even the slightest sounds of approaching game.

Magnum Ear can also receive communication through your two-way radio. An optional loop antenna connects to your hand-held radio and lets you hear transmissions without removing the instrument.

Available in a style that fits every need and budget, Magnum Ear fully customized in-the-ear and EarScope behind-the-ear models provide the ultimate in comfort and safety.

With all you've invested to improve your hunting and shooting skills, let the Magnum Ear hearing maximize the good sense that nature already has given you.
