

"What a difference! [It] brought back to life the deep resonance of the lower piano register, while caressing –not burying– the sparkling upper tones. Sound not only pleased, but inspired me. It gave me a sense of how wonderfully vibrant music can be."

Until now, the need for additional hearing power often meant compromising the other conveniences and benefits of even the most advanced technology. Today you can have the power you need without sacrificing any of digital amplification's many advantages.

Introducing the **DaVinci Precision Extreme Power (PxP)**, exclusively from Starkey Laboratories. The technology that has experienced power wearers saying some pretty impressive things.

Your DaVinci PxP Professional:

"I felt compelled to play."

**Inventor. Painter. Architect.
Mathematician. Sculptor. Engineer.
Anatomist. Sketch Artist.
Astronomer. Geographer. Botanist.**

Renaissance Man.

Starkey is dedicated to designing and delivering the most versatile array of amplification solutions to meet the widest variety of listening needs and lifestyles.

Symbolic of that accomplishment, the DaVinci BTE product family is named in honor of one of history's most prolific and innovative thinkers.

Can DaVinci PxP Benefit You?

DaVinci Precision Extreme Power: Precision performance plus so much more.

“My main disappointment with my old hearing aid was volume. But with my Starkey DaVinci, I’m able to experience more volume than I ever thought possible.”

Simply put, the **DaVinci PxP** is the most powerful digital, directional, behind-the-ear instrument available. Not just more power, but clean, clear digital amplification that many experienced wearers perceive as a significant improvement over their previous analog or even digital aids.

The precision part of DaVinci PxP’s digital sophistication comes from Starkey’s proven

Precision Audio Imaging (PAI) operating system. It features noise management, feedback cancellation and powerful programmable telephone coil technology. Each offers better clarity and compatibility in a wider range of listening environments and on the telephone.

“I was eager to try the directional microphone and the difference was dramatic. I did much better hearing speech using the directional setting.”

To enhance understanding in the most difficult, noisy situations, DaVinci PxP utilizes Starkey’s exclusive **Precision Directional Imaging (PDI)**. This innovative audio reception system helps emphasize

sounds and conversations in front of you, while minimizing less important sounds to the side and behind you.

Depending on your individual listening requirements, PDI’s directional reception can be activated by pushing DaVinci’s ergonomically-efficient, multi-function control.

“To use the telephone without hassle was one thing, but now...to be able to use my cell phone hands free is unbelievable!”

Overcoming another limitation of traditional amplification, DaVinci PxP is the first behind-the-ear instrument to offer wireless, hands-free connectivity with Bluetooth-enabled mobile phones and other compatible devices.

The lightweight **ELI** (Ear Level Instrument) module connects directly to DaVinci PxP’s audio input interface and provides single-button call answering and disconnect within a 30-foot range. Its built-in, rechargeable power supply requires no energy from the hearing instrument battery and lasts up to 140 hours in standby mode.

Ask us today how DaVinci Precision Extreme Power can provide you with uncompromised digital hearing power.
