SoundPort™ 

Introducing The *ULTIMATE* In Customized Wireless Communication

Do you depend on your mobile phone for constant communication?

Are you tired of wire-dependent, "one-size-fits-all" solutions that fit poorly and sound even worse?

Do the laws in your state ban the use of hand-held mobile phones while driving?

If so, now you can have the ultimate mobile-communication solution.

Introducing **SoundPort**, the world's first custom-fit, Bluetooth® EarSet for your Bluetooth-compatible mobile phone. SoundPort is designed for people who want the ultimate

solution in lightweight, comfortable, hands-free, wireless communication.

Unlike traditional wireless headsets, the SoundPort EarSet features a

custom-fit earpiece which is professionally molded and acoustically tuned to fit the exact contours of your outer ear.

Fully vented so that nearby sounds and conversations can be heard normally, the earpiece anchors SoundPort's sleek, digital electronics, creating an open, feather-light system that delivers the ultimate in freedom and safety to work and drive while using a mobile phone.

SoundPort is part of the **HearWireless** family of audio solutions from Starkey

The SoundPort EarSet

Laboratories. As the world's largest maker of custom hearing technology for 30+ years, Starkey knows a thing or two about ears and hearing. That knowledge and experience is what creates SoundPort's superior sound quality and acoustics.

Because of its unique, customized technology, the SoundPort EarSet is available exclusively from your authorized local hearing and telecommunication specialists.

Ask us today how you can begin enjoying the ultimate in comfortable, hands-free, wireless communication with **SoundPort**.
