Astronomer. Geographer. Botanist.

Leonardo da Vinci

At Starkey, we dedicate ourselves to designing and delivering the most versatile array of amplification solutions to meet the widest variety of listening needs and lifestyles.

To symbolize that accomplishment, we named our DaVinci BTE product family in honor of one of history's most prolific and innovative thinkers.

A NEW LEVEL
OF FLEXIBILITY,
PERFORMANCE
AND DESIGN.

Exclusively from Starkey

Combining a high-power standard BTE configuration with an open-fitting capability in a new “Hybrid” design.

Introducing **DAVINCI PRECISION SUPER POWER – PsP™**.

PsP is the latest addition to Starkey’s DaVinci family of digital, behind-the-ear instruments. An innovative hybrid design provides the flexibility for standard, super-power fittings or is easily convertible to an instant-fit, open-ear instrument. PsP’s unique design attributes are accomplished through the merging of mechanical design excellence with advanced product features. We invite you to discover a new level of flexibility, performance and design with DaVinci PsP.

DaVinci PsP Standard

DaVinci PsP Open

DaVinci PsP Exact Fit with optional volume control cover

FLEXIBILITY

DaVinci PsP is a true hybrid hearing instrument. “Hybrid” is defined as a hearing instrument that is convertible from a conventional BTE configuration, which has a standard earmold and tubing, to an open-fitting configuration, which uses a thin-tube, open-fit custom earmold or a instant-fit earbud. PsP standard and PsP open offer the same programmability and features.

In the open configuration, PsP uses either the On-The-Ear fitting kit earbud or the custom, non-occluding Exact Fit earmold, an earhook adapter and micro-tubing. This minimizes occlusion for patients who have a greater hearing loss than a standard open-ear instrument can adequately accommodate.

PERFORMANCE

DaVinci PsP offers best-in-class power and directionality. PsP is the most powerful hybrid hearing instrument available on the market, with 68 dB peak gain and 132 dB peak output. Industry-leading levels of directionality also provide exceptional performance for all patients. In fact, clinical participants preferred PsP’s mono-microphone automatic Precision Directional

Imaging™ (PDI) system in the majority of all listening situations – a significant breakthrough, because PDI preserves low-frequency gain and minimizes microphone noise while in the directional mode.

DaVinci PsP Standard shown with the optional ELI DirX (Ear Level Instrument) Bluetooth® wireless system.

DESIGN

PsP’s streamlined, channel-back design offers more than just good looks. A unique suspended receiver system also works as a double shock absorber to provide more high-powered, usable gain. Exciting colors, including two-tone combinations, and optional open-fit and ELI DirX™ wireless accessories, provide patients with an extremely flexible BTE without compromising performance or aesthetics.
