

Destiny 1200

Your Future Is Here.

Get better, clearer, more natural hearing with the most technologically advanced digital instrument available.

It's Destiny.

Better Hearing Through Superior Science

Chances are, you've spent time looking for a hearing instrument that provides clear, quality sound without any associated problems – feedback, artifacts, or white noise. Now, your search is over. Over the past decade, Starkey Laboratories has researched cutting-edge technology with the goal of developing the most advanced hearing product in history. The result: Destiny, a digital instrument created with the power and intelligence of nanoscience that is sensitive, adaptive, and nearly as intuitive as the human ear.

With the Destiny 1200, you will hear even the most subtle sounds. Our state-of-the-art integrated circuit ensures every Destiny provides the very best feedback erasure and directional capabilities currently available. Destiny 1200 has been enhanced even further with Acoustic Signature – a landmark management system that detects and classifies different sound environments, and transitions seamlessly between them.

A device that delivers the listening experience you deserve. Finally, the wait is over.

Standard features of the Destiny 1200 include:

Active Feedback Intercept (AFI) – the most effective feedback erasure system ever developed. AFI uses an entirely new patent-pending method that actually moves nuisance signals in time, so not only does the feedback virtually disappear, there are no irritating sound artifacts left behind.

Acoustic Signature – a sophisticated, technology-driven system that detects and classifies listening environments and switches seamlessly between them, providing a totally natural hearing experience and clearer, better sound quality than ever before.

Directional Speech Detector (DSD) – standard on behind-the-ear styles and optional on ITE and ITC – with the quietest directional mode in hearing aid history. DSD continuously monitors the decibel levels in noisy environments and adjusts its reception area.

Automatic Telephone Response – a first-of-its-kind nanotech switch that senses an analog telephone signal the moment the receiver is lifted to the ear.

Starkey's nFusion Technology represents a groundbreaking advance in better hearing. The first instrument ever to use nanoscience in its design, the Destiny 1200 offers features never before available: complete feedback erasure, a revolutionary system that recognizes and classifies incoming sounds instantly, directional microphones to make quiet moments pure, and a component specifically designed to make telephone communication clear and static-free.

The best technology is complex to the point of simplicity. That's nFusion. Find out how the powerful circuit inside our Destiny 1200 can bring the world of natural, effortless hearing back to you.
