

**HEARING PROTECTION
& AMPLIFICATION FOR
SHOOTERS**

Proven Technology. Exceptional Protection.

As a hunter or shooter, your hearing is a vital sense to your success. Magnum Ear is an electronic device designed for hunters and shooters who want hearing protection as well as environmental awareness. Available in behind-the-ear (BTE) and custom-fit in-the-ear (ITE) models for ultimate comfort.

Advanced Features Set Magnum Ear Apart From the Rest

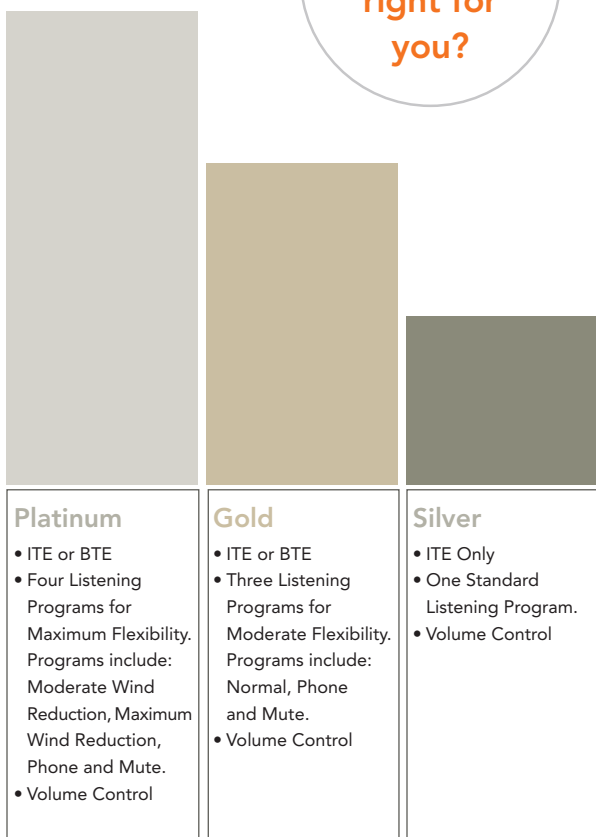

Magnum Ear devices use proven technology to provide you with both exceptional hearing and protection.

- Designed to provide you with superior **wind noise reduction**, providing clarity in situations that matter most.
- Eliminates annoying feedback or noise to ensure a **virtually whistle free** experience.
- **Compact and easy to wear** throughout the day, unlike bulky and uncomfortable earmuffs or earplugs.
- **Noise Reduction Rating (NRR) 24 dB for ITE and 26 dB for BTE.** NRR is a measurement, in decibels, of how well a hearing protector reduces noise as specified by the EPA. The higher the NRR number, the greater the noise reduction.

Three Technology Levels to Meet Your Every Need

Magnum Ear is available in three different technology levels with varying features and price levels. All Magnum Ear products include Wind Noise Reduction and eliminate feedback providing the most comfortable and state-of-the-art hearing protection on the market today.

Which level is right for you?

Note: All BTE devices come standard with three sizes of foam COMPLY eartips
Custom earmolds available at an additional cost (ear impression required).
